SUBJECT:

SUPPLEMENTAL SAMPLING OPPORTUNITY IN OPERABLE UNIT 13 - MFM-031-93

Due to a planned maintenance activity in Tent #1, I have an opportunity collect two surficial soils samples that should help to characterize the possible contamination in Individual Hazardous Substance Site (IHSS) 117.2, Operable Unit (OU) 13. Preliminary results from screening level samples indicate that there may be metals contamination below the pavement inside Tent #1. Therefore, I have requested and received concurrence from the Department of Energy (DOE), the Environmental Protection Agency (EPA), and the Colorado Department Department of Health (CDH) to move two of the sampling locations from outside the tent area to the interior as shown on accompanying Figure 5. These actual surveyed locations will be included in the technical memorandum that is being prepared for agency concurrence before the regular surficial sampling begins. I believe that these locations are better sampling locations than those selected on September 28, 1993. In addition to improved access to the entire IHSS, this is an opportunity to collect samples from below the pavement without incurring additional costs of removing and patching the pavement.

The sampling will be performed by Jacobs Engineering Group, the subcontractor that is also conducting the surficial soils sampling in OU 10. This limited sampling in OU 13 will be conducted using the same operating procedures in effect at OU 10 and falls under the approved Industrial Area (Integrated OUs) Health and Safety Plan. There is an existing soil disturbance permit in place which includes surficial surface sampling. As the project manager I have completed all the relevant training including Rad Worker II, OSHA 40 Hour and OSHA 8 Hour Supervisor.

For these reasons and because this is a limited sampling effort, I am requesting that this effort be exempted from project readiness review prior to the initiation of sampling on Thursday, December 16, 1993.

SUBJECT:

MEETING MINUTES FROM 12/17/93 DRAFT FINAL REPORT REVIEW - SGB-006-93

in attendance:

Suzanne Berman Dan Hepler Ted Karas Rick Moore Mark Wiebe Frank Rukavina

Suzanne:

Add sentence re: recycling to 1st observation. Items considered paragraph on releases not part of Interagency Agreement (IAG).

Dan:

Blank copy of computer field include form or deleted sentence → include blank Non-Destructive Testing (NDT) form. Crosses AGMs - policy directs Level 1 document. Tank management disposition planning.

Frank:

Obs. 3 - systems management in interim - problem with non-conformance and need to be addressed. Beef up! Frank write up observation - new observation. Discussion on NCRs and MEL to track work orders. More detail to Obs. 5 - work package in RCRA (Resource Conservation and Recovery Act) programs Frank Walker rewrite. Beef up Level 1 procedure assign responsibility to create.
